

## AMENDMENTS TO THE SPECIFICATION

Applicants respectfully request that paragraph 4, lines 22-29 on page 8 of the specification be replaced with the following amended paragraph:

In the preferred embodiment, T cells from the donor, e.g., an allogeneic or xenogeneic donor, will be cultured *in vitro* with recipient allogeneic or xenogeneic tissue which has been treated (e.g., irradiated) to deplete host T-cells. To this culture, an effective amount of a gp39 antagonist, typically an anti-gp39 antibody, will be added (e.g., 24-31 or 89-76 anti-human gp39 antibody ~~disclosed in U.S. Pat. No. GET 313#~~). This culture will be maintained for a time sufficient to induce T-cell tolerance. Typically, this time will range from about 1-2 days to 30 days, more typically about 5-15 days, and most typically about 10 days.
